Brand New Book ***** Print on Demand *****.Excerpt from Report on the Progress of Vegetable Physiology: During the Year 1837 The study Vegetable Physiology advances with rapid steps, the small number of its labourers annually increases, each year adds to the importance of its results; and we already look forward to the time when a decided separation of vegetable physiology from descriptive botany must take place, for it appears that these two sciences cannot simultaneously be pursued by one and the same botanist to such an extent as the present time demands. The number of anatomico-physiological publications of the past year is extremely great; and it is morphology especially which has engaged during that period the largest share of attention; at present a contest awaits it similar to that which previously vegetable anatomy had to undergo, where not a single observation was admitted without opposition. So also morphology must not be the work of speculation, but should be founded wholly and solely on the observation of nature; studied in this way, it will become a doctrine easy to comprehend, which will enlarge to a great extent our knowledge of the nature of plants. From the active interest which has been taken in vegetable physiology, and from the immense increase of materials, this report becomes from year to year a more arduous undertaking; as, however, it is of some utility for the diffusion of the science, the reader will kindly overlook those faults with which such a thankless task must always be accompanied.
